DETAILED ACTION

Election/Restrictions

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

- I. Claims 1, 3, 4, 5, and 6, are drawn to a method for enhancing somatic recombination at a genetic locus comprising promoting homologous DNA recombination by relaxing the chromatin structure of chromosomes in said somatic cells and immunocytes for which said somatic homologous recombination has been promoted.
- II Claim 7 is drawn to an **immunocyte** for which said somatic homologous recombination has been promoted.
- III. Claims 2, 12, 13, 14 and 15 are drawn to a method for antibody production comprising promoting homologous DNA recombination at an antibody locus when producing antibodies from immunocytes in which DNA homologous recombination is occurring by relaxing the chromatin structure of chromosomes in said immunocytes and thereby obtaining diverse antibodies.
- IV. Claims 8 and 9 are drawn to **the antibodies** produced by promoting homologous recombination.
- V. Claims 10 and 11, drawn to a medical agent for the promotion of somatic homologous recombination at a genetic locus, comprising a histone deacetylase inhibitor.

Application/Control Number: 10/522,644 Page 3

Art Unit: 1633

The inventions listed as Groups I, II, III, IV and V do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical reasons:

37 CFR 1.475 (c) states:

"If an application contains to more or less than one of the combinations of categories of invention set forth in paragraph (b) of this section, unity of invention might not be present" 37 CFR 1.475 (d) also states:

"If multiple products, processes of manufacture, or uses are claimed, the first invention of the category first mentioned in the claims of the application and the first recited invention of each of the other categories related thereto will be considered as the main invention in the claims, see PCT article 17(3)(a) and 1.476(c)".

The inventions listed as Groups I, II, III, IV and V do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical reasons: the technical feature linking groups I, II, III, IV and V appears to be that they all relate to construct a variety of diverse antibodies by promoting homologous recombination of DNA at a genetic locus in an immunocyte. However, prior art has described a marked induction of somatic immunoglobulin V genes hypermutation that is achieved by ablating the RAD51 (Nature, August 2001, pp. 921-926). Therefore, the technical feature linking the invention of groups I, II, III, IV and V does not constitute a special technical feature as defined by PCT Rule 13.2, as it does not define a contribution over prior art for the reasons set forth above.

Art Unit: 1633

The inventions listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical reasons:

A method for a method for enhancing somatic recombination at a genetic locus and the immunocytes generated by said method as claimed in Group I is functionally different from the method claimed in Group III wherein the method is used for the production of diverse antibodies by using the homologous recombination that occurs in immunocytes, said production of diverse antibodies is not required by the method of Group I. Hence inventions of Group I and Group III are drawn to methodologies with different modes of operation, each being used in different capacities, having different functions and producing different effects. Moreover, the invention of Group IV is drawn to diverse antibodies generated by promoting homologous recombination at an antibody locus, which is a distinct invention from the medical agent comprising a histone deacetylase claimed by Group V or the invention of Group II drawn to immunocytes. The invention of Groups IV, V or II are not coextensive. Because these inventions are distinct for the reasons given above, and are separately classified and searched, it would be unduly burdensome for the examiner to search and examine all of the subject matter being sought in the presently pending claims, and thus, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 1633

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Maria Leavitt whose telephone number is 571-272-1085. The examiner can normally be reached on M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joseph Woitach, Ph.D can be reached on (571) 272-0739. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

To aid in correlating any papers for this application, all further correspondence regarding this application should be directed to Group Art Unit 1633; Central Fax No. (571) 273-8300. Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to (571) 272-0547.

Patent applicants with problems or questions regarding electronic images that can be viewed in the Patent Application Information Retrieval system (PAIR) can now contact the USPTO's Patent Electronic Business Center (Patent EBC) for assistance. Representatives are available to answer your questions daily from 6 am to midnight (EST). The toll free number is (866) 217-9197. When calling please have your application serial or patent number, the type of document you are having an image problem with, the number of pages and the specific nature of the problem. The Patent Electronic Business Center will notify applicants of the resolution of the problem within 5-7 business days. Applicants can also check PAIR to confirm that the problem has been corrected. The USPTO's Patent Electronic Business Center is a complete service center supporting all patent business on the Internet. The USPTO's PAIR system provides Internet-based access to patent application status and history information. It also enables applicants to view the scanned images of their own application file folder(s) as well as general patent information available to the public.
